Software Developer with experience in mobile-app full-stack development and leading product cycle from conception to completion. With recent experience working on a small team at a technology startup.

## **Software Engineer • PainNavigator • Chicago IL • 2022-Present**

- ▶ Sole developer for this project, which uses a React Native/Ruby on Rails stack, responsible for contributing new features and functionality, as well as maintaining the existing code base.
- ▶ Work closely with the CEO, translating high level requirements into the project, making all technical decisions, while taking into account user experience and scalability.
- ▶ Leveraged the Ruby on Rails framework for building the dashboard for the clinics that use PainNavigator, so they can monitor their patient's live progress and program engagement.
- ▶ Manage all DevOps tasks for the company as well as being responsible for deployment using the Apple App Store, Google Play Store and Heroku.
- ▶ Monitor and handle incident response for the mobile app and server.
- ▶ Created the test suite using Jest and React Native Testing Library.

## **Electronic Engineer • Wren & Cuff • Newbury Park CA • 2020-2022**

- ▶ Assembled and repaired various guitar effects working off physical and digital diagrams.
- ▶ Quality control and testing of all products to ensure meeting company standards before going to market.
- ▶ Assessed damaged merchandise to make recommendations on best outcome.

## **SKILLS**

- ▶ React, React Native, TypeScript, Golang, Solidity, Hardhat, JavaScript, Node, Express, Ruby, Rails, Python, Django, SQL, MongoDB, CSS.

## **EDUCATION**

**General Assembly • Software Engineering Immersive • Remote • Jan 2022- April 2022**
